TITLE : METHOD FOR IDENTIFYING
ENTERING OR EXITING PERSON AND
INNER SOLE FOR FOOTWEARE USED
FOR THE SAME METHOD

ABSTRACT : PROBLEM TO BE SOLVED: To provide a method for facilitating the attachment and detachment of a record medium without altering footwear and the inner sole for the footwear used for this method.

SOLUTION: This identifying method identifies an entering or exiting person by reading identification information recorded on the record medium that the entering or exiting person carries by an identifying device installed at the entrance exit of a management area. In this case, the record medium is mounted detachably between the footwear and foot of the entering or exiting person, preferably, below the foot. This inner sole 3 for the footwear used for the said entering/exiting person identifying method has the record medium 1 such as an IC card embedded and then the record medium 1 can easily be mounted in the footwear 5.
